NUCLEAR REGULATORY COMMISSION

[Docket Nos. STN 50-454, STN 50-455, STN 50-456, and STN 50-457]

Commonwealth Edison Co.; Notice of Consideration of Issuance of Amendments to Facility Operating Licenses, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of amendments to Facility Operating License Nos. NPF-37 and NPF-66, issued to Commonwealth Edison Company (ComEd, the licensee) for operation of Byron Station, Units 1 and 2, located in Ogle County, Illinois and Facility Operating License Nos. NPF-72 and NPF-77, issued to ComEd for operation of Braidwood Station, Units 1 and 2, located in Will County, Illinois.

This notification addresses the beyond scope items identified in the requested amendments dated December 13, 1996. The proposed amendments would revise current Technical Specifications (CTS) of each unit to conform with NUREG-1431, Revision 1, "Standard Technical Specifications—Westinghouse Plants." The beyond scope issues were further supplemented by letters dated October 10, 1997,

February 13, 1998, April 13, 1998, June 2, 1998, July 8, 1998, September 25, 1998, and October 1, 1998. The following descriptions and proposed no significant hazard analyses cover only those beyond scope changes. Associated with each change are administrative/editorial changes such that the new or revised requirements would fit the format of NUREG-1431.

1. CTS Limiting Condition of Operation (LCO) 3.1.3.5 states that "all shutdown rods shall be fully withdrawn" when in MODE 1 and MODE 2 with K_{eff} greater than or equal to 1.0. ComEd proposes to change the applicability to MODE 1 and MODE 2 with any control bank not fully inserted. The revised requirement will be stated as ITS 3.1.5.

2. CTS 3.1.3.2.a.1 states, "Determine the position of the non-indicating rod(s) indirectly by the movable incore detectors at least once per 8 hours and immediately after any motion of the non-indicating rod which exceeds 24 steps in one direction since the last determination of the rod's position * * *" ComEd proposes to eliminate the requirement for "immediate" determination of rod position. This is an administrative change. The revised requirement will be stated as ITS 3.1.7.

3. CTS Surveillance Requirement (SR) 4.1.2.7.a requires each Boron Dilution Protection System (BDPS) subsystem to be demonstrated OPERABLE at least every 12 hours. One of the requirements to determine OPERABILITY is to "verify that (each subsystem's) associated nuclear instrumentation source range detector is OPERABLE and indicating greater than or equal to 10 counts per second." OPERABILITY of the source range nuclear instruments is accomplished by satisfactorily completing the SR of CTS Table 4.3-1. The surveillance cannot be performed in the higher MODE without utilizing jumpers or lifting leads, which could result in an undesirable reactor transient. Consequently, ComEd proposes to allow the unit to enter the MODEs of applicability from a higher MODE (i.e., entering MODE 3 from MODE 2) without having performed the SR; however, the surveillance must be completed within 4 hours after entering the mode of applicability. This revised requirement will be stated as ITS SR 3.3.9.7.

4. CTS SR 4.2.3.5 requires the determination of reactor coolant system (RCS) total flow rate by a precision heat balance measurement. No time limit is stated for completion of this SR; however, it must be done prior to the completion of PHYSICS TESTS. ComEd
